CERTIFICATES:

IBM Cloud Private Foundation Technology
IBM Blockchain Foundation Developer
IBM Blockchain Essentials V2
Google Digital Active, Google

Motivated worker, a junior ML engineer with a specialization in Blockchain, and hands-on experience in building decentralized applications and optimizing large language models.

A dynamic young professional with a proven ability to communicate effectively with clients and leverage technical skills to solve complex problems. I bring a strong foundation and a continuous passion for learning to deliver high-impact solutions. Trilingual, I thrive in fast-paced, challenging environments and am determined to prove my value wherever I go.

PROFESSIONAL EXPERIENCE:

- **Customer Loyalty Specialist | Telus Digital**
January 2025 - Now

One of the biggest télécommunication companies in Canada. My role was to offer alternatives and negotiate with clients so they keep their services with Telus and eventually make them loyal customers. In this role I was also troubleshooting customers equipments, managing orders and I sold a variety of products ranging from mobile, satellite or fiber internet, television and home security solutions.

- **ML Engineer Intern | Unify**
September 2024 - January 2025

With a human-sized startup team, I collaborated in the improvement of an LLM, the deployment and optimization of settings to ensure performance, helped document the deployment process and create demos for clients to see the capabilities of our product.

- **Customer Service Rep. in Technical Support | Intelcia**
April 2023 - August 2024

Responsible for technical support for SFR, one of the major Internet and mobile company in France, I was diagnosing and resolving issues encountered by clients on their fibre Internet lines. My role also included managing customer interactions with a view to satisfaction and loyalty, ensuring clear and effective communication while respecting deadlines and quality standards.

- **Consultant & Blockchain Application Developer**
February 2020 - May 2022

As a Blockchain Application Developer, I specialized in building decentralized web applications, particularly for clients in the banking, finance, and art sectors. By leveraging blockchain's security and transparency features, along with my expertise in asset tokenization and blockchain integration, I enabled clients to digitize their assets, streamline and secure their operations, and reduce associated costs.
